OBJECTIVE

Computer Science B.S. candidate (Feb 2026) focused on Android (Kotlin/Jetpack Compose) and backend development (C#/.NET). Built 4+ larger full-stack projects including PlantPal (capstone), delivering REST APIs, data models, and integration with a 3-person Android team.

SKILLS

- | | | |
|-----------------|--------|------------------|
| • Kotlin | • Java | • C# |
| • Documentation | • C++ | • Testing and QA |

EXPERIENCE

BACKEND DEVELOPER

October 2025 - Present

Full Sail University, Winter Park, FL

- Led backend development for an academic capstone plant care app; designed server-side architecture and implemented REST endpoints and 4+ different data models.
- Implemented REST API + database for plant data and reminders; coordinated integration and testing with a Android front-end team of 3.

WEB DEVELOPMENT

June 2020 - July 2020

Northeast Florida S&J Tree Farm, Jacksonville, FL

- Rebuilt and refreshed a small business website (structure, layout, and content updates) to improve clarity and usability over 2 months.
- Delivered updates end-to-end: iteration with owner, deployment, and up to 7+ post-launch fixes.

EDUCATION

Bachelor of Science in Computer Science (B.S.)

February 2026

Full Sail University, Winter Park, FL

- Capstone: PlantPal (team project) — backend development, REST API + database integration.
- Coursework: Data Structures & Algorithms, Database Systems, Software Engineering, Mobile Development, Computer Networks, Operating Systems.
- Academic focus: Android development (Kotlin/Jetpack Compose) and backend services (C#/.NET).

PROJECTS

PlantPal

October 2025 - Present

- Led back-end development with 2 other developers for an academic capstone project, designing server-side architecture for a plant care application, tracking health metrics such as watering, fertilization, and sun exposure.
- Built a RESTful API and database to handle plant data and reminders, and coordinated with 2 team members to integrate system and deploy final application.

Sucra

October 2025 - Present

- Developed an Android app in Kotlin to help users manage Type 1 diabetes, allowing logging of blood glucose readings, insulin doses, and meals.
- Constructed features to display trends in sugar and insulin intake, including 3 different graphs for each.

VoiceJournal

May 2025 - June 2025

- Built a solo Android journaling app in 4 weeks using Kotlin and Jetpack Compose, enabling users to record voice entries and transcribe audio into text.
- Developed keyword tagging for entries, a calendar-based interface for browsing journal history, and integrated Google Drive API for optional cloud backups of entries up to 24 months.

Untitled 3D First Person ASCII Engine

March 2024 - October 2024

- Created a 3D first-person game engine in C#, rendering scenes in real time using only ASCII characters in the Windows console.
- Implemented a ray-casting algorithm and optimized game loop to maintain smooth performance with minimal resources at stable 60 frames a second.

Independent Projects

January 2018 - Present

- Implemented and shipped personal apps and prototypes across Android and C#/.NET, including 12+ small applications and 4+ larger full-stack projects.
