SKILLS

C#, Kotlin, Java, Python, C++, SQL	.NET, Jetpack Compose, Android SDK
Git/GitHub, REST APIs, Relational Databases, Unity, Visual Studio, Android Studio	Object-Oriented Programming, Data Structures & Algorithms, RESTful Architecture, Agile/Scrum, Test-Driven Development

EXPERIENCE

Software Development Student Full Sail University, Winter Park, FL	October 2023 - February 2026
- Delivered 16+ applications (12 small-scale, 4 full-stack) in C#, Kotlin, and Java, applying modular architecture and reusable component design. - Built RESTful APIs and relational database schema for 4 production-style academic projects. - Collaborated in 3-person Agile teams leveraging Git feature branching, conducting sprint planning and peer code reviews to deliver projects on deadline. - Applied clean architecture principles emphasizing scalability, maintainability, and modular designs over 2 years. - Conducted average of 5-per-week peer code reviews to improve code quality and reduce merge conflicts. - Coordinated up to 7 API contracts between frontend and backend components.	

EDUCATION

Bachelor of Science in Computer Science (B.S.) Full Sail University, Winter Park, FL	February 2026
Relevant Coursework: Data Structures & Algorithms, Software Architecture, Data Modeling & Visualization, Applied Systems Development.	

PROJECT LIST

PLANTPAL	October 2025 - February 2026
- Designed and synchronized 2 RESTful API and relational databases for plant health tracking and user achievement. - Architected backend system in collaboration with 2 developers in Agile environment. - Synchronized 2 reminder scheduling systems for watering, fertilization, and sunlight monitoring and custom reminders. - Mentored co-developer in proper version control procedure and Jira board consistency.	
SUCRA	October 2025 - January 2026
- Built from-the-ground-up Kotlin Android application for Type 1 diabetes management. - Developed structured, 7-days-a-week logging system for blood glucose, insulin dosage, and meals. - Engineered dynamic trend visualizations using three distinct graph models. - Implemented intuitive, clean, and concise UI using Jetpack Compose principles.	
VOICEJOURNAL	May 2025 - June 2025
- Developed 1 full Android journaling app using Kotlin and Jetpack Compose. - Integrated speech-to-text transcription for up to 160+ voice entries per day. - Authored keyword tagging and 7-days-a-week calendar-based entry navigation. - Integrated Google Drive API for optional cloud backups (up to 24 months).	
3D ASCII ENGINE	March 2024 - October 2024
- Engineered 3D ray-casting engine in C# rendering real-time ASCII graphics in Windows console. - Optimized game loop to maintain stable 60 FPS performance. - Established collision detection, camera movement, and environmental rendering for smooth 60 frames a second gameplay.
